

FLUID EJECTION DEVICE UTILIZING A ONE-PART EPOXY ADHESIVE

ABSTRACT

5 A fluid ejection device, including a substrate carrier having a substrate
receiving-surface, and a substrate having at least one fluid ejector actuator
disposed on the substrate. In addition the fluid ejection device includes a one-
part adhesive disposed between the substrate and the substrate-receiving-
surface. The one-part adhesive is an epoxy resin having a polyglycidyl ether of
10 a polyhydric phenol, a solid cycloaliphatic amine curing agent.
